PRESS RELEASE

Decantis, the wine app that never guesses, is now on the App Store

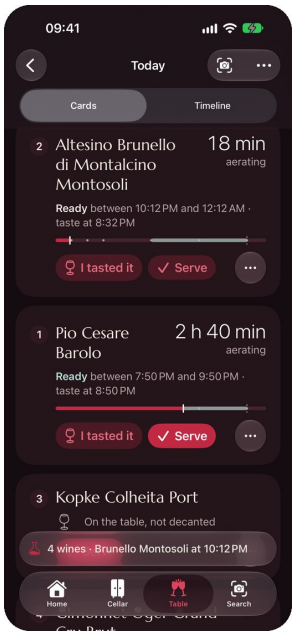

Made in Portugal by an independent studio, Decantis tells you whether a wine is ready to drink, if it needs decanting and for how long, what temperature to serve it at and what to eat with it. Free for iPhone and iPad, in five languages. The AI only reads the label; the advice comes from a rules engine with its sources in plain sight.

Porto, Portugal, 11 November 2026. Decantis is available on the App Store as of 5 November. Type a wine's name or snap its label and, in seconds, the app tells you whether the wine is ready to drink or still closed, whether it needs decanting or aerating and for how long, what temperature to serve it at and how long to leave it out of the fridge, and what to eat with it. Every answer comes with the reasons and the sources.

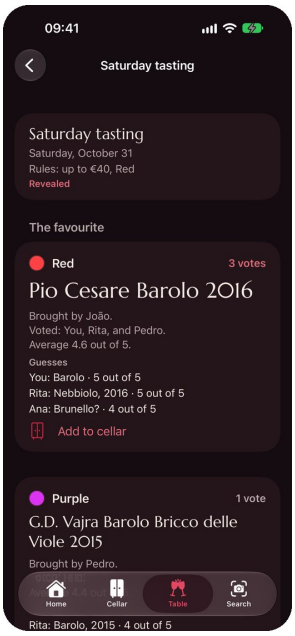

What sets it apart is how the answer is made. "AI does exactly one job in Decantis: it reads the label," says founder Filipe Sá. "The advice comes from our own rules engine, built from producers, regional wine boards, sommeliers and technical literature. When the vintage or the type isn't certain, the app asks instead of guessing." Hence the line that goes with the brand: the wine app that never guesses.

The answer

The table

Blind tasting

Decantis was designed for the table. At a dinner with several bottles, each wine gets its own timer, with tasting reminders and a serving order; the timers show on the Lock Screen, and the table can be shared by link so guests follow the times on their own phones. There is a blind tasting mode (everyone brings a bottle, the bottles arrive covered, everyone votes at the end, and the app reveals who brought what and who guessed right), a cellar that shows each wine's drinking window, and the option to snap a restaurant's wine list to choose better. It works with Siri, has widgets and syncs through iCloud. An account is optional: sign in with Apple, Google or email to add friends from your contacts or by link, set up groups for dinners and use Decantis+ on all your devices; without one, the whole app still works.

The app is free, with no ads and no data sold: the cellar stays on the device and in the user's own iCloud. The optional Decantis+ subscription (19.99 € a year or 2.99 € a month, with two weeks free) adds a year-by-year drinking plan for the cellar, the exact time to take each bottle out for dinner, an unlimited cellar and unlimited blind tastings for organisers. Everything else stays free, for good.

Decantis is available in English, Portuguese, Spanish, French and Italian. It was built with Apple's native tools (SwiftUI and the new Liquid Glass design) and with full accessibility from the first version, including VoiceOver and Dynamic Type. It is published by WeLove Studios, an independent studio in Espinho, near Porto. "I built the app I wanted at my own dinners with friends," says Filipe Sá.

An Android version is planned.

About Decantis

Decantis tells you, for any wine, when to open it, whether to decant it and for how long, what temperature to serve it at and what to eat with it. AI reads the label; the advice comes from the app's own rules, with the sources in plain sight. Free for iPhone and iPad, in five languages. Made in Portugal by WeLove Studios.
